Yates correction for continuity was used in calculating this test.

Chi-square= 45,670 with 1 degrees of freedom. (P = <0,001)

The proportions of observations in different columns of the contingency table vary from row to row. The two characteristics that define the contingency table are significantly related. (P = <0,001)

Power of performed test with alpha = 0,050: 1,000
